

Measles case was reported in Tokyo

In 2007, there was an epidemic of measles among teens and twenties, more than 260 high schools and universities were closed nationwide.

What are
measles
and
rubella?

Measles and rubella are viral infections and highly contagious. Washing your hands and wearing a mask are not enough for prevention.

What should
I do?

An effective preventive method is
vaccination.

What can we do?

**Let's check the health checkup results at entering
Gifu University.**

Who should
have it?

Measles less than 16
Rubella less than 8
Those who are eligible
additional vaccinations.

How can I
have vaccine?

Contact a medical institution
Let them know in advance that you want to have vaccine of measles or rubella. You can search for specialized hospital in vaccinations at the JSTH (Japanese Society of Travel and Health) website.
